Sir:

In response to the Office Action dated 25 February 1998, please enter the following amendment:

IN THE CLAIMS:

1. (Amended) A method of determining [the] a nucleotide sequence at an end of a polynucleotide, the method comprising the steps of:

ligating one or more encoded adaptors to [an end] the ends of identical copies of the polynucleotide, each encoded adaptor being a double stranded deoxyribonucleic acid comprising [having] an oligonucleotide tag selected from a minimally cross-hybridizing set of oligonucleotides between 8 and 20 nucleotides or basepairs in length and a protruding strand complementary to a portion of a strand of the polynucleotide, wherein each oligonucleotide of the minimally cross-hybridizing set differs from every other oligonucleotide of the set by at least two nucleotides; and

identifying one or more nucleotides in each of said portions of the strand of the
